8 Abstract

One or two sentences providing a basic introduction to the field, comprehensible to a scientist in any discipline. Two to three sentences of more detailed background, comprehensible to scientists in related disciplines. One sentence clearly stating the general problem being addressed by this particular study. One sentence summarizing the main result (with the words "here we show" or their equivalent). Two or three sentences explaining what the main result reveals in direct comparison to what was thought to be the case previously, or how the main result adds to previous knowledge. One or two sentences to put the results into a more general context. Two or three sentences to provide a broader perspective, readily comprehensible to a scientist in any discipline.

My extremely interesting and novel paper research

21 Introduction

The broad issue in your field get funneled into the aspects that you are going to study, as has been done in recent times by (Abbott et al., 2019) (but see also Phillips (2012)). Then you justify why that is important and state some hypothesis. Later you tell the reader the objectives of your study and how the paper is organized.

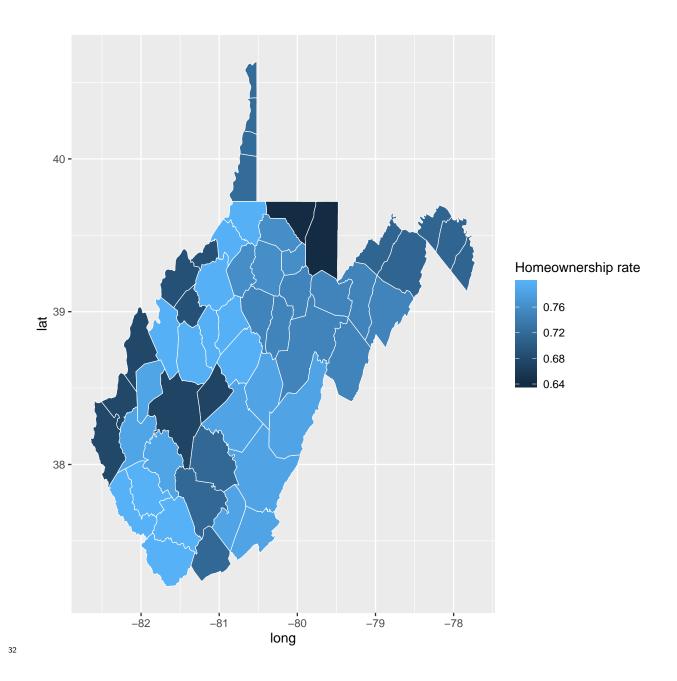

26 Methods

We report how we determined our sample size, all data exclusions (if any), all manipulations, and all measures in the study.

Study site

20

- We collected the data from all of West Virginia, looking
- at the Homeownership rate, which maybe has something to do with something else (Figure 1).

3 Data analysis

We used R (Version 3.6.1; R Core Team, 2019) and the R-packages citr (Version

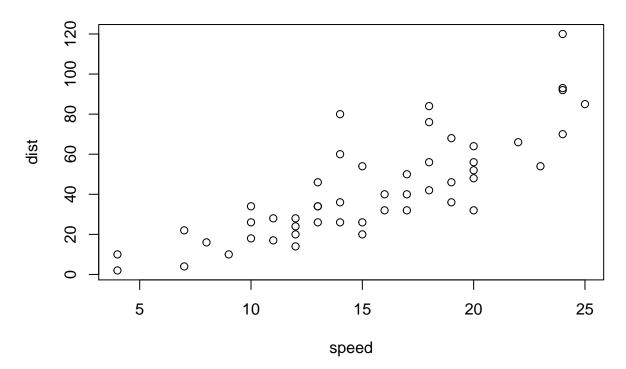

- ³⁵ 0.3.2; Aust, 2019), dplyr (Version 0.8.3; Wickham et al., 2019), forcats (Version 0.4.0;
- ³⁶ Wickham, 2019a), *ggplot2* (Version 3.2.1; Wickham, 2016), *papaja* (Version 0.1.0.9842;
- 37 Aust & Barth, 2018), purrr (Version 0.3.2; Henry & Wickham, 2019), readr (Version 1.3.1;
- Wickham, Hester, & Francois, 2018), stargazer (Version 5.2.2; Hlavac, 2018), stringr

- (Version 1.4.0; Wickham, 2019b), tibble (Version 2.1.3; Müller & Wickham, 2019), tidyr
- (Version 1.0.0; Wickham & Henry, 2019), tidyverse (Version 1.2.1; Wickham, 2017), tinytex
- (Version 0.16; Xie, 2019), and urbnmapr (Version 0.0.0.9002; Strochak, Ueyama, &
- Williams, 2019) for all our analyses.

Results

We found that there is a positive relationship between the speed of a Car and the distance it needs in order to completey stop (figure 2)

Figure 2

The linear model developed to explain that relationship is robust in the explanation of distance $R^2 = 0.65$.

Values can also be seen in table 1.

speed	dist
4	2
4	10
7	4
7	22
8	16
9	10
-	

50

Discussion

 $_{52}$ The findings have been also repoted in other papers...

It can be concluded that driving at higher speeds can create more hazardous situations.
